

Photo booth Mask

Drawing Assignment

your assignment!

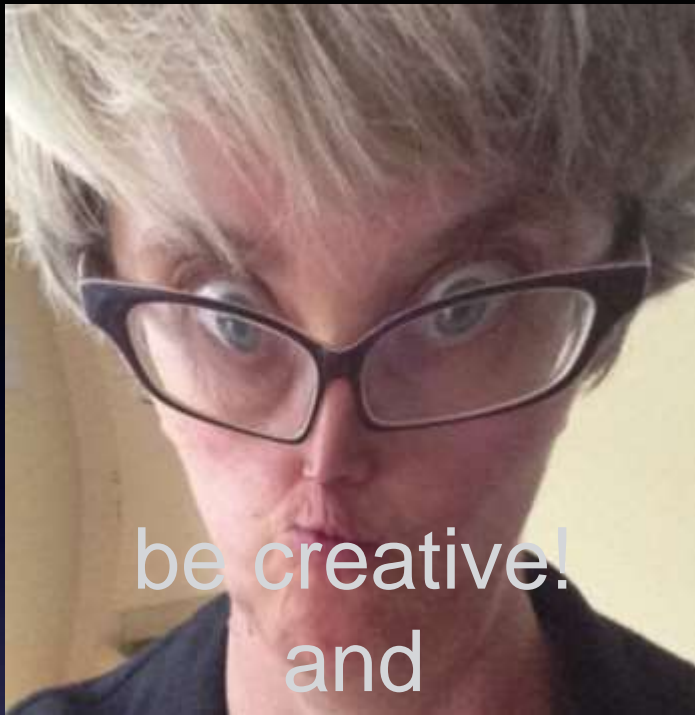

use the photo booth to take a distorted picture of yourself

distortion is important!

avoid light tunnel and kaleidoscope effects

be creative!
and

have FUN

Use your own ipad or
iphone or borrow one in
class form Ms Bowyer

you will save your photos
on the ipad and email your
best 2 to your own email

you will print out your top 2
and re-draw one using a
grid. Finally, add chalk or
paint to create colour

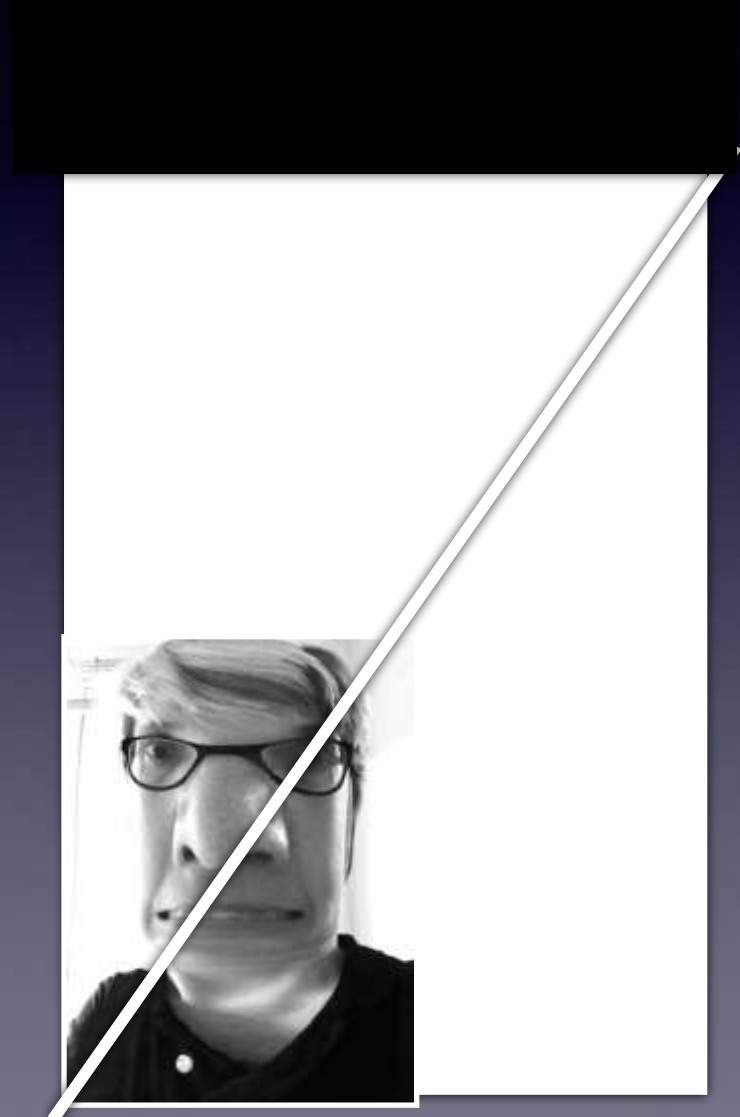

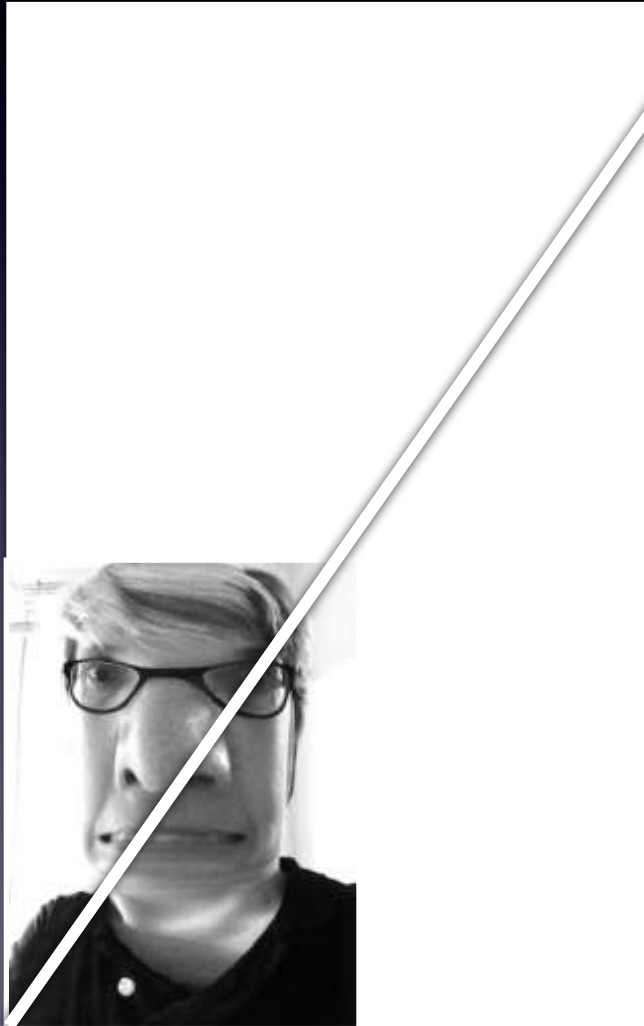

Divide your
picture up
evenly.

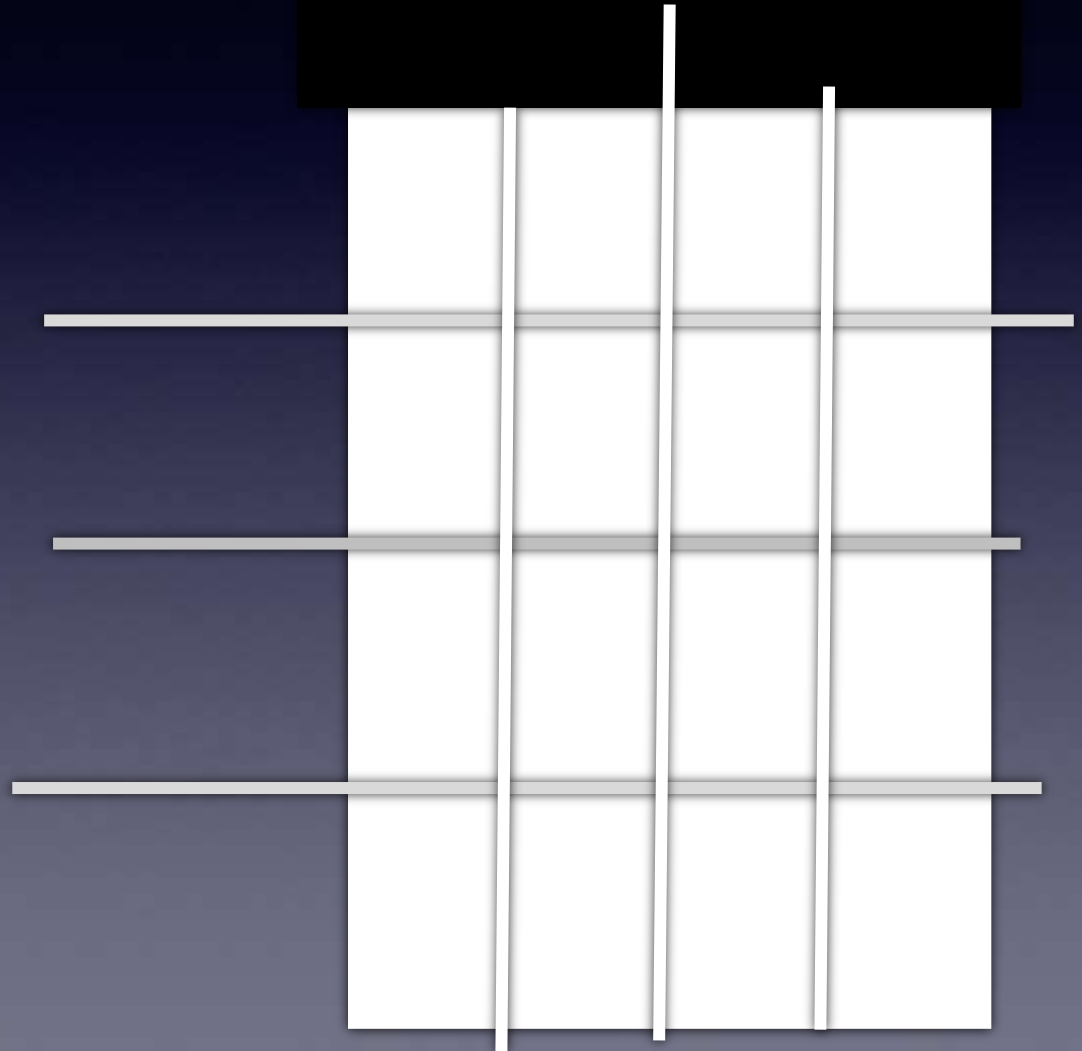

An easy
way to do
this
is to FOLD
it!

Set your photo on your paper. Use a meter stick and measure corner to corner. Cut off the extra bit and your page will be the same ratio.

Now **lightly** draw the same number of squares on your good paper. 4 x 4 You may use math to calculate the size.

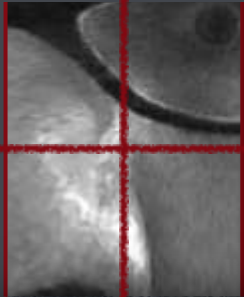

Look at one
square at
a time

No really.
This is
important

Also look
at it
upside down

For part with
a lot
of
information
it helps to
divide
it up again

Try to draw the shape of the highlight (the bright area) and the shadow (the dark area) You don't have to fill in the shapes because you will be using paint for that.

CHOOSE SOME STRANGE COLOURS

Choose a colour for your highlight and an analogous colour for your shadow. Or use tints and shades of your original colour making it MONOchromatic

Some Samples: remember weird colours and simplify the shapes of the highlights and the shadows
